## FOREWORD

In 1982 the Alberta Agriculture Library produced the first edition of an index to local agricultural conference proceedings held from 1979-1981. The index filled a need for access to locally relevant information on Alberta/prairie agriculture. This need continues, and, in fact, has grown with the further development of agricultural research activities in the province.

This edition of the index covers conferences held between 1982 and 1984. Most of these 55 conference proceedings are primarily agricultural and are fully indexed. Several conferences that contained only a few papers relevant to agriculture were only partially indexed. The Alberta Agriculture Library (AEAG) holds copies of all but one of the conference proceedings. The Alberta Reclamation Conference Proceedings are available at the Alberta Environment Library (AEEN).

This project was supported in part by the Alberta Government's special employment program. Material for this publication was indexed by Deborah Penner, Project Librarian. June Smith, Reference Librarian, Alberta Agriculture, coordinated the project.

## GUIDE

The index is comprised of three sections. The first section lists the 55 conference proceedings indexed. The middle section, the main body, contains nearly six hundred and sixty entries arranged under seventeen major subject categories. No entry is listed twice. An author index comprises the third section.
